Professional Summary

Technical support candidate with a Linux and networking background and hands-on experience diagnosing and fixing problems on live client systems. Fluent English (spoken and written), native Arabic, working French, and intermediate Spanish. Comfortable explaining technical issues in plain language over phone, chat and email. Available for night and rotating shifts.

Core Skills

- **Troubleshooting:** root-cause analysis, log reading, reproducing issues, clear escalation notes.
- **Operating Systems:** Linux (Gentoo, Debian-family, command line), OpenBSD, Windows 10/11 basics.
- **Networking:** DNS, TCP/UDP, HTTP/HTTPS, ports and reachability testing, Nginx, VPS and server setup.
- **Web & Databases:** WordPress, PHP, Node.js, PostgreSQL, MySQL, payment gateway issues (Stripe, PayPal).
- **Tools:** Git, Docker, Bash scripting, SSH, remote administration.
- **Soft Skills:** clear written and verbal communication, patience with non-technical users, phone outreach in English, working independently.

Experience

Freelance Technical Support & Web Developer | Remote, international clients | 2025

- Communicated directly with international clients in English by email and calls: gathered symptoms, reproduced problems, delivered fixes and explained them in non-technical terms.
- Audited and stabilized a legacy PHP/MySQL e-commerce site, tracing errors through server logs and fixing checkout and payment (Stripe) failures.
- Maintained a WordPress petition site handling thousands of signatures, resolving PayPal donation issues and mobile performance problems for low-bandwidth users.
- Deployed and maintained client servers (Nginx, HTTPS, process monitoring) on Linux VPS hosting.
- Made outbound phone calls in English to small businesses in the UK, building comfort with live calls and objection handling.

Technical Projects

- **Self-Hosted Lab:** Gentoo Linux with custom kernel and initramfs builds, OpenBSD administration, and personal self-hosted services that I run and troubleshoot myself.
- **Monitoring & Diagnostics Tools:** an HTTP uptime monitor (Lua), a TCP/UDP reachability scanner (C) and a log-filtering CLI (C) for finding problems in large log files.
- **Self-Healing Infrastructure Platform (Go):** observability stack with automated remediation that detects and fixes production anomalies without manual intervention.
- **Booking Platform (React, Node.js, PostgreSQL):** deployed on a VPS with HTTPS, with database-level protection against double-booking.

Languages

- **English:** fluent, spoken and written
- **Arabic:** native
- **French:** professional working proficiency (B2)
- **Spanish:** intermediate (B1)

Education

École Marocaine des Sciences de l'Ingénieur (EMSI), Fes

Classes Préparatoires, Years 1 & 2 completed (computer science, electrical engineering, C, data structures and algorithms). Certificates of success available on request.

Baccalauréat (High School Degree)

Sciences Expérimentales, filière Physique – Chimie (Fes, Morocco).
